

# 54.1 Testing of Electrical Revolution Counter

---

107

## **Tester: Revolution Tester**

The instrument cluster of Type 107 is provided with a transistor revolution counter. The instrument operates electrically and is controlled by the ignition. The adapter for connection to the transistor ignition is an integral part of the revolution counter.

If wrong indication is suspected, a comparison test can be made with a revolution tester.

For this purpose, connect revolution tester acc. to instructions and compare.

This is the only possible method for making a test.
