

**Special Tool**

Mounting lever

107 589 00 37 00

**Removal**

- 1 Remove partition between tank and trunk (68.1–700).
- 2 Loosen compensating tank (1). (Two sheet metal screws in top well.)
- 3 Unscrew fastening clips of torsion bars.
- 4 Position mounting lever (2) above torsion bar spring and tighten screw (4) well.
- 5 Support trunk lid.
- 6 Turn mounting lever downwards (refer to arrow in Fig. 1) and lift torsion bar spring with both hands out of hinge lever (5) (Fig. 2).

# 75.1 Removal and Installation of Torsion Bar Spring

**8** Loosen screw on mounting lever and remove from torsion bar spring.

**9** Remove torsion bar spring (3) at left from hinge lever for top well lid (6) (Fig. 4).

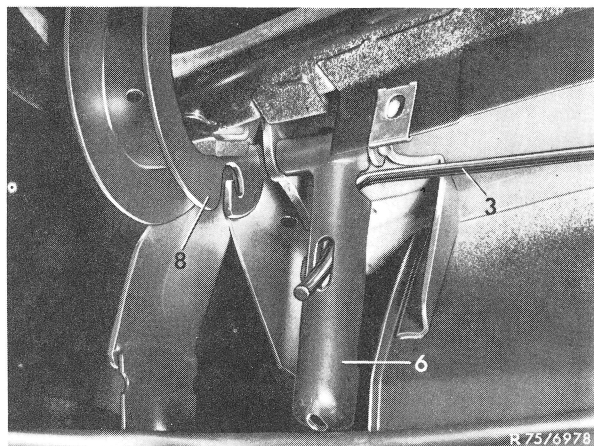

Figure 4

- 3 Torsion bar spring
- 6 Hinge lever for top well lid
- 8 Hinge lever trunk lid left

**10** Disconnect second torsion bar spring in the same manner from trunk lid hinge.

**11** Remove torsion bar spring from holder (7) (Fig. 2).

## Installation

**12** For installation proceed vice versa. Make sure that the shorter torsion bar 6 mm thick is attached first to mounting (7) and then to trunk lid hinge (8) (Fig. 2 and 4). Tension spring by approx. 1/2 turn for connection to trunk lid hinge.

Attach second, longer torsion bar 5.5 mm thick first to hinge lever for top well lid (6) (Fig. 4). Tension spring by 1/2 turn and attach to trunk lid hinge (5) (Fig. 2).
